Your Drains Need Help To Stay Clean

Roto-Rooter Pipe Shield

Exclusive Roto-Rooter formula. Creates a shield on the inside of pipes to help keep waste from building up and clogging drains.

- ▶ Keeps drains free-flowing longer
- ▶ Treats the whole drain system — not just the trap
- ▶ Specially formulated to break down long-chain fatty acids — the number one cause of clogs
- ▶ Concentrated — one gallon makes 64 treatments — that's years of treatments when used monthly as directed
- ▶ Commercial strength — available only from Roto-Rooter Service Technicians
- ▶ **Environmentally safe**
- ▶ NSF Approved – safe for use around food areas
- ▶ Keeps your pipes “Roto-Rooter Clean”

Tree Roots A Potential Problem

Roto-Rooter Root Destroyer

- ▶ Roots from trees and shrubs find their way into drain lines and sewer pipes through small cracks, holes or poorly sealed joints
- ▶ These tiny root hairs can continue to grow inside your lines, blocking water flow and even causing pipes to break
- ▶ These roots will continue to grow back causing another blockage
- ▶ A twice-a-year application of Roto-Rooter Root Destroyer retards the growth of roots near your drain line
- ▶ Pour the recommended dosage into your toilet bowl and flush the product into the line. Roto-Rooter Root Destroyer will kill only the roots growing into the pipes and will not affect the rest of your plant's root systems

Help For Septic Systems

- ▶ Breaks down greases, starches, proteins and other organic materials that can clog septic tanks, drain fields and cesspools
- ▶ High-potency formula of cultured bacteria and selected enzymes reactivates the bacterial action that is vital to your septic system's (or cesspool's) proper operation
- ▶ Also contains growth promoters for vigorous bacterial activity
- ▶ Contains no solvents – environmentally safe
- ▶ Available in liquid or powder – powder comes 12 pouches to a canister – a year's supply
- ▶ Liquid comes in an easy pour bottle that requires no mixing – years of treatments when used monthly as directed

RootX®

When you need to kill roots that are invading drain lines, but local requirements prohibit the use of Roto-Rooter Root Destroyer, use RootX®. It inhibits the entry of roots beneath pavement structures. RootX prevents re-growth, is easy to use, and has no negative effects on the environment. RootX is non-systemic and kills roots at the point of contact.

*RootX is for use after drains have been cleaned out. RootX and Root Destroyer can only be sold in certain areas based on state regulations.
